 CheckGPS

## What is CheckGPS?

CheckGPS is a miniature multi-purpose device for vehicles, which is capable of fulfilling its basic functions for a long time without charging. CheckGPS provides valuable monitoring, determining the location, speed of movement, direction and other significant data in the case of theft, damage during transportation, etc.

## How does it work?

The device transmits its location coordinates and other data at certain time intervals using GPS and GSM networks. Access to the information is possible through both the online system and the mobile application.

CheckGPS can collect the following data for you:

- GPS coordinates
- Number of GPS satellites
- GSM tower
- GSM strength
- Temperature
- Acceleration
- Battery power level

## What are the benefits of CheckGPS?

### ✓ **Ready for use –**

hide the device and use the system immediately after purchasing! No wiring or installation needed, just log in on the web or use the application

### ✓ **Size matters –**

miniature size relative to battery durability. Depending on necessity, different forms of housing are possible

### ✓ **100% reachability –**

international SIM will send coordinates from any location

### ✓ **IP67 and accelerometer –**

shock resistant, durable and waterproof. A warning with coordinates will be sent in the case of any impact

### ✓ **Longevity –**

can work autonomously for 2 years without changing the battery

### ✓ **Easy to hide –**

sleep mode prevents it being discovered

Besides, the CheckGPS system displays all traceable properties and persons on the same map, sends messages about territory crossing, as well as saves the route history.
