theft of
your car
into mission
impossible!

SKYBRAKE CAN

What is SKYBRAKE CAN immobilizer?

The unique CAN immobilizer is a powerful vehicle security device, specially designed for each make and model of car. It ensures protection even if your vehicle keys are stolen, and due to the extra-small size it is impossible to find it when installed on a car.

How does it work?

The immobilizer is connected to the vehicle's CAN bus line and operates through the original wires, making device detection by standard methods almost impossible. Safe protection against electronic hacking is ensured by a data encryption system that was specially developed for this product. Car unblocking is possible with a PIN-code, a secret combination of original vehicle buttons.

What are the advantages?

- ✓ Operation via factory buttons (original car buttons)
- ✓ Does not indicate its presence before unblocking
- ✓ Automatic engine disable, gearbox disable and window closing functions
- ✓ Additional security through the use of factory vehicle sensors
