

want to
know a tiny
little secret
to keep your
car from
being stolen?

SKYBRAKE DD5

What is SKYBRAKE DD5 immobilizer?

The DD5 immobilizer is a powerful new generation vehicle security device, which ensures protection even if your vehicle keys are stolen. Due to the extra-small size it is impossible to find it when installed on a car.

How does it work?

The system is convenient for everyday use with no additional operations required from the driver when using a car equipped with DD5. Safe protection against electronic hacking is ensured by a data encryption system that was specially developed for this product. The immobilizer is connected to the vehicle's CAN bus line and operates through the original wires, making device detection by standard methods almost impossible.

What are the advantages?

- ✓ Convenient for everyday use
- ✓ Ensures protection and disables the engine even if your car keys are stolen
- ✓ “Invisible” system due to the extra-small size
