

no need to
worry, let the
GSM GPS
look after
your vehicle!

SKYBRAKE GSM/GPS

What is GSM GPS?

SKYBRAKE GSM GPS is a sophisticated car alarm, which allows the user to control it directly from their smartphone and constantly receive system status messages, being updated 24/7 on where the car is located and whether it is safe.

How does it work?

The built-in sensor detects if the vehicle has been tampered with. In the case that someone tries to do even the slightest activity with your car it will be reported to you. The system is connected to the vehicle's CAN bus line and has more than 400 car models in the CAN bus database, with an option to customise the functions to meet

What are the advantages?

Control
by original remote
control

Built-in GPS
receiver

Built-in
adjustable tilt and
shock sensor

Control by cell
phone (App for
Android and iOS)

- Find your car location
via GPS
- Block engine
- Start engine
- Start/Stop autonomous car
heater and other
